## SESSION DESCRIPTORS:

### WHAT MAKES THEM TICK?

Presented by Judith Petruzzi, PSEA Education Services

All of our students have different brains, and they learn differently. This session shares some of the latest brain research and discusses strategies for students with a variety of impairments. Based on Eric Jensen's research, we discuss approaches to empower your most frustrating students!

### STEM - AN INTEGRATED APPROACH TO LEARNING

Presented by Jennifer Daniels, Gettysburg Area EA

Many of the current teaching practices are done in silos that make it difficult to dive deeply into the standards. Teaching integrated STEM units allows for more time and flexibility to reach students. Students are also engaged in activities that reinforce the 21st-century skills. Participants will be given examples of integrated units, growth mindset information, resources to investigate, and practical "how-to" guidelines.
